

XRPL COINS

WHITEPAPER v.3

BUILDING **REAL UTILITY** FOR THE XRPL COMMUNITY

XRPL Coins is an intuitive Web 3.0 platform allowing users to easily interface with many of the native functions available on the XRP Ledger.

We set out on a mission to develop an all-in-one solution that empowers users to leverage the inherent benefits of the XRP Ledger, all while tapping into the community. We've built a live price tracking platform for issued currencies on the XRPL, followed up with a full suite of trading tools utilizing the native DEX functionality, created an innovative Any Swap tool to allow users to swap between any two coins on the XRPL, integrated social functions directly connected to a user's wallet address utilizing XUMM, and much more.

AGGREGATED DATA

Most of our data is retrieved directly from the XRP Ledger utilizing XRPL APIs and ledger web sockets to ensure that XRPL Coins has accurate up-to-date information. Currently, we are developing our own historical data servers and APIs that will allow our platform to provide more efficient data for the community.

[VIEW COIN DATA](#)

DECENTRALIZED EXCHANGE

Since 2012, the XRP Ledger has had built-in DEX functionalities which allowed us to offer a unique user interface for trading XRPL coins. The trading tool quickly finds liquidity and matches buyers with sellers while providing the best rates possible. Technical analysis charting will be added once development of the historical data APIs is completed.

[VIEW DEX](#)

ANY SWAP

XRPL Coins offers an innovative Any Swap tool on the XRP Ledger that allows users to trade between any two currencies issued on the XRPL in one signed transaction. The Any Swap tool utilizes the native pathfinding and auto-bridging technology from the XRP Ledger to execute multiple trades at once while offering the best conversion rates possible.

[VIEW ANY SWAP](#)

SOCIAL NETWORK

Social functionalities are now integrated, which is directly connected to a user's wallet address utilizing XUMM sign-requests. Become an influencer or a casual user by posting, commenting, tipping, direct messaging, or even live chatting with the community. Once XLS-20D is live on mainnet, users will have the ability to comment, like, and trade NFTs directly from their profiles.

[VIEW SOCIAL NETWORK](#)

NFT MARKETPLACE

The NFT Social Marketplace will utilize the proposed XLS-20D standards that are currently in the amendment phase of adoption. Once live on mainnet, users will have the ability to create collections, mint NFTs, and start trading directly from their social profiles. In addition, NFT listings will have social components such as sharing, liking, and commenting.

COMING SOON

PORTFOLIO TRACKER

Portfolio Tracking is integrated for all users that are logged into their account. The wallet address is retrieved from the XUMM sign-in account and analyzed to produce the value breakdown represented in the Portfolio Tracker. The historical user data APIs will allow for the ability to track profit and loss.

[VIEW PORTFOLIO TRACKER](#)

XRPL RICHLIST

XRPL Coin's backend utilizes XRPL APIs to automatically scan every coin listed on our platform daily and returns the balance, value, and wallet address for each and every holder. The Richlist also indicates when the last snapshot of the ledger was taken, displays user specific Richlist rankings, and provides direct links to XRPSCAN and Bithomp to analyze specific accounts.

[VIEW RICHLIST](#)

SNAPSHOT DOWNLOADER

Leveraging the power of our Richlist system, the Snapshot Downloader compiles results into a snapshot and allows users to download the data into a .CSV file format. Utilizing XRPL APIs, the snapshot is automatically performed daily for every coin listed on our platform. The Snapshot downloads can be used for analysis or by projects to issue airdrops, rewards, and more.

[**VIEW SNAPSHOT DOWNLOADER**](#)

COIN BURNER

The Coin Burner tool helps users prepare transactions to burn a portion or entire supply of a specific coin. This is useful when a user holds a small balance of a specific coin and wants to burn it from their account to remove the trustline or for projects looking to burn coins from the total available supply.

[VIEW COIN BURNER](#)

ABOUT xCOIN

We have issued xCoin to be the native token used on the platform to gain access to premium features on xrplcoins.com.

xCoin is a deflationary coin in that every transaction burns 0.1% and all purchases on platform using xCoin gets sent back to the blackholed issuer account thus burning the supply. With a fixed supply of 10,000,000 coins, we have already burned more than 70,000+ xCoin from January – July of 2022.

FAUCET DROP

The Faucet Drop was developed to offer rewards to supporting users that answer a simple math sequence question; available once daily. The rewards get automatically sent to the user's account once the math sequence is successfully answered within 3 available attempts and the amount received is based on the user's total holdings of \$xCoin.

[VIEW FAUCET](#)

xCOINBACK REWARDS

The xCoinback Rewards program allows users to earn 1% in xCoin per buy order + 0.1% of the users current xCoin holdings. The requirements to qualify for the rewards are that you must use the XRPL Coins Any Swap or DEX when placing your trade, buy a minimum of 10 xCoin, have a minimum balance of 100 xCoin and maximum payout per user is 3 xCoin every 3 hours.

10M TOTAL SUPPLY

XRPL Coins was the first to distribute a coin on the XRP Ledger in a highly secure process including a 5 part questionnaire, silent airdrops, holder airdrops, and faucet. Our intention was to maintain the integrity of our currency by preventing bots, airdrop farmers, and malicious organizations from getting ahold of xCoin.

OUR TEAM

Our fully in-house team consists of an eclectic group of creatives and developers who have worked on many projects currently running on the XRP Ledger. From design to development, our team does not rely on outsourcing any work to third-parties to build on our platform; unlike most other projects. We have an in-depth understanding of the technology we're building on and how to develop new innovations.

BRUCE SILVERA II

FOUNDER // OPERATIONS DIRECTOR

@txnblock

Opened my first web development and marketing agency 10 years ago and still going strong. Self-taught entrepreneur specializing in development, graphic design and marketing. I'm a crypto enthusiast that's motivated to build new and innovative tools for the XRP Ledger.

KOHN NGUYEN

CREATIVE DIRECTOR

@itskohn

Creative from head-to-toe with interests in art, collectibles, NFTs and all things Web3 and beyond. Nearly 15 years of experience in creative direction, project management, video production, and graphic design. A natural born leader, fueled by team collaboration and competition.

KERUB QUERUBIN

XRPL DEVELOPER

@kerubkim

When I'm locked into my work, nothing can distract me. After attending a coding bootcamp 8 years ago, I found my passion where I can apply my logic and problem solving skills. My desire to learn and self-motivation has allowed me to become the full-stack developer I am today.

NIKOLAUS "XRP DEV"

XRPL DEVELOPER

@XRP_DEV1

Started programming as a hobby when I was twelve years old, graduated in computer science and currently studying law. I've been working as a full-stack dev for over three years and now very active making videos for the XRPL community and running my own validator.

PAWEL NOWAK

FRONT-END DEVELOPER

@MentorPK21

I started studying computer science in my mid twenties after realizing that working in sales was not fulfilling for me. I went back to college and graduated with a bachelor in computer science and since been active in the workforce specializing in front-end development for the past 5 years.

TRANSPARENCY IS **KEY**

We fully believe being transparent is the key to building trust with the community and a project that will outlast others. **XRPL Coins** is on a mission to put up a new standard in the market.
